

# itembase Prestashop 1.4-1.5 plugin

## System Prerequisites

- PHP Version 5.1.x
- OpenSSL Module for PHP active
- If PHP Curl is used: Curl Version greater 7.18.x
- In der php.ini: allow\_url\_fopen = On

## Installation instructions

The following steps are necessary to activate and configure the plugin.

- 1.) Login to your Admin-Backend
- 2.) Open Prestashop Admin Panel -> Modules and click "Add new module".
- 3.) In section "Add a new module" click on "Choose file", select itembase.zip and click "Upload this module".
- 4.) In Prestashop Admin Panel -> Modules select "itembase" in "Sort by" and click on "Filter" to see the new module on the modules list.
- 5.) Find the "Itembase" module and click "Configure"
- 6.) If you have already itembase account and API keys go to next step. If you want to create itembase account, fill registration form with your E-mail, First Name, Last Name and select your shops you want to register in itembase and click Register. You will receive an email with password and API keys which you can set in the next step. Depending on your hosting configuration the keys can be saved automatically.
- 7.) Select shop for which you have API keys in the top header. Enter the API key and Secret key for this shop in the "Settings" form at the bottom and click save.
